**HHS Stakeholder Relationship diagrams:**

Timely implementation of Modules that meet the Stakeholders business needs are a critical component to the success of the new system. Stakeholders have a part in all aspects of the project including: oversight of the project; input into the initial project goals; requirements identification and validation; design and configuration sessions; interfaces and data exchanges; user acceptance testing; training; document review and approval; and CMS certification. Many departments, divisions and bureaus work together to assure the external stakeholders (members and providers) are able to obtain or provide services. The diagrams below demonstrate the relationships between the State's departments, divisions and bureaus as of March 2016 which is subject to change.
